# Finish the Collider!

Can you…

(1) Run the collider? (Requires installing ipycanvas into your environment)

(2) Split into groups of two: one of you invites the other as a collaborator on your GitHub repo (the fork you made)?

(3) Each make a branch for development?

(4) Make changes to the collider? The README-collider file has suggestions, but you can do whatever you want.

(5) Incorporate your changes into one merged, updated collider?

Let's try!

**I expect you to know how collaborative coding with Git works for the exam, based on this example.**
